

## **PLANT MAINTENANCE**

Manufacturing plants and other industrial facilities often require insulation and sealant in their maintenance and repair schedules. Polyurethane foam is often specified to meet the physical needs for these tasks, but often due to the layout of the facility, logistics will make it impossible to use a conventional foam machine brought in by a polyurethane foam contractor.

These projects call for a FOAM IT GREEN® disposable portable system! Take it to whatever location foam needs to be applied. No outside source of power or pressure is required. In addition, no special training is required to use FOAM IT GREEN®, so anyone on the maintenance and physical plant crew can use it.

FOAM IT GREEN® is available in different densities each with different sizes. It can be used as insulation for walls, ceilings, undersides of roofs; insulation for pipes, tanks, duct work; it can be used to seal large gaps and crevices; and for sound deadening.
